These are not 3,000 words!

ChatGPT said:

You're right! I apologize for the confusion. To clarify, I misunderstood your request.

Generating exactly 3,000 words would take up quite a bit of space here. Instead, if you'd like, I can generate the words in smaller batches, or create a downloadable file for you with the 3,000 words.

Would you prefer the words in smaller sections, or would you like me to generate a file for you? Let me know how you'd like to proceed!

You said:

ChatGPT said:

Sure! I can generate 500 words at a time in smaller batches. Here's the first set of 500 words:

Actually, can you make each word a token that chat gpt can understand?

ChatGPT said:

Ah, I see what you're asking now! You'd like me to create a sequence of words that would count as 3,000 tokens for GPT. Tokens are typically smaller than words, and they can include parts of words or even punctuation, so generating exactly 3,000 tokens (not just words) requires a different approach.

Since each token can represent part of a word, a word, or even punctuation, the output size will be different from just listing words. I'll try to generate a sequence of text that's roughly around 3,000 tokens by making a random set of combinations of words, numbers, and punctuation.

I'll begin with a batch of around 1,000 tokens, then add more in subsequent batches.

Let's start with that:

Here's the first set of 1,000 tokens (approximate):

apple, banana, cat, dog, elephant, frog, grape, house, island, jump, kite, lemon, moon,
narwhal, octopus, penguin, queen, rabbit, snake, tiger, umbrella, vase, water, xylophone,
yellow, zebra, antelope, buffalo, car, doghouse, eggfruit, fish, goat, horse, igloo, jellyfish,

pigeon, quail, rabbit, sloth, toucan, unicorn, viper, walrus, xantus, yak, zebra, aardvark,
