Start program??? For my program I will be making a rock paper scissors game, but with a points Ask input for rock, system so that the game will go on longer and be more competitive. paper, or scissors for 1. Get the player's choice for rock, paper, or scissors, and the computer's random the player. choice for rock, paper, or scissors. 2. If the player wins, add one point to the player's score, and print the player's input and computer's input. 3. If the computer wins, add one point to the computer's score, and print the player's input and computer's input. 4. If they tie, add no points to either side and go again, and print the player's input Make the computer and computer's input. decide rock, paper, or 5. The game stops if either of the computer or player gets 5 points. scissors by random. 6. If the player gets the 5 points first, print ascii art of a trophy, and ask player to go to the championships. If the computer gets the 5 points first, print ascii art of a computer and end game. player choice = rock player choice = rock display player choice and computer choice, IF ALL ELSE FAILS — computer choice = — If not computer choice = and add 0 points to each side. If not last 2 scissors display player choice and computer choice, display player choice and computer choice, and add one point to the player's score and add one point to the computer's score Print that the player won and print ascii art; Player gets 5 points make a choice for the player to go to the YES championships, (same thing as before but with 7 points). Print that the computer won and print ascii art; end the game Print ascii art of computer winning; end game Print ascii art of trophy; end game Copy and paste same code as the original game, alter some things so that it works. — Player wins —
